Reason for the DoubleCut harvester

Request HempFlax:

- Total crop valuation
- Technology needed
- Whole crop separation in field
- Deliver high quality outputs:

Basic Concept

DoubleCut overview

Upper header

John Deere 616R header or
CANN 616 Draper (option) header

CANN DoubleCut DC4510 Module

Special designed cutter house. Powered by the combine,
feeded by the lower header. Creates a perfect swad of stems.

CANN TFT10 Top Flower Trailer

Storage capacity approx. 2-3 tons flower
Easy and fast unloading without damaging of the product

Lift

Lift for Upper Header.
The upper header feeds
the standard feederhouse
of the combine.

Lower header

Kemper/John Deere 445 header
with CANN Hemp kit

Combine

John Deere T6XX / W6XX
Modelyear 2016 and up

Advantages of the DoubleCut system

- Quality outputs
- Only the top of the plant is processed by the combine.
 - > Dryer and higher quality seed.
- Pure and clean separated seed and leaf.
- Better quality stem in comparison by combine processed alternatives.
- Optimal size windrow with without contamination.
- Proven technology.
- High reliability and low down time

Fiber harvester

- Based on SPFH John Deere 8100-8600
- Prototype field tested 2021
- Higher capacity
- Wider range cutting length
- First customer in 2022

Why John Deere base machinery?

- Global dealer network
- Critical parts: JD original
- CANN supports dealers
- Results in > high service level for customers
